

Here's the text formatted according to your preferred style:

- **People Search API via Filters**

The People Search API via Filters allows you to search for detailed professional profiles based on custom filters. This API provides real-time results, making it a powerful tool for gathering information about professionals matching specific criteria.

When to Use

Use this API when you need to retrieve professional profiles that match certain criteria, such as industry, job title, location, company size, and more. It's ideal for:

- **How to Make a Request**

To use this API, send a POST request to the following endpoint:

POST /screener/person/search

Authentication

Include your Bearer token in the Authorization header.

Request Headers

- **Content-Type:** application/json
- **Authorization:** Bearer <your_token>

Body Parameters

- **filters (array):** An array of filter objects specifying your search criteria.
- **page (integer):** The page number for pagination.
- **Building Filters**

Filters allow you to refine your search results by various criteria. Each filter object should include:

filter_type: The type of filter you want to apply.

type: The operation type (e.g., in, not in, between).

value: The value or range of values for the filter.

Refer to **How to Build Filters** for a comprehensive guide on creating filters, including valid **filter_type** and **value** options.

- **Example Requests**

Example 1: Find Senior Executives in Technology Companies

To find senior-level professionals in technology companies with more than 500 employees:

```
{
  "filters": [
    {
      "filter_type": "INDUSTRY",
      "type": "in",
      "value": ["Technology", "Information Technology and Services"]
    },
    {
      "filter_type": "COMPANY_HEADCOUNT",
      "type": "in",
      "value": ["501-1,000", "1,001-5,000", "5,001-10,000", "10,001+"]
    },
    {
      "filter_type": "SENIORITY_LEVEL",
      "type": "in",
      "value": ["CXO", "Vice President", "Director"]
    }
  ],
  "page": 1
}
```

- **Example Requests**

Example 2: Locate Professionals with Specific Skills

To find professionals skilled in Machine Learning and Data Science:

```
{
  "filters": [
    {
      "filter_type": "KEYWORD",
      "type": "in",
      "value": ["Machine Learning"]
    },
    {

```

```

    "filter_type": "CURRENT_COMPANY",
    "type": "in",
    "value": ["Google", "Microsoft"]
  },
  {
    "filter_type": "CURRENT_TITLE",
    "type": "not in",
    "value": ["Software Engineer", "Data Scientist"]
  }
],
"page": 1
}

```

- **Example 3: Search by Company and Title**
To find people currently working at "Acme Corp" with the title "Marketing Manager":

```

    {
      "filters": [
        {
          "filter_type": "CURRENT_COMPANY",
          "type": "in",
          "value": ["Acme Corp"]
        },
        {
          "filter_type": "CURRENT_TITLE",
          "type": "in",
          "value": ["Marketing Manager"]
        }
      ]
    },
    "page": 1
  }
}

```

Response

Successful Response (200 OK):

A successful response returns a JSON object containing:

profiles: An array of professional profile objects matching your filters.

total_display_count: The total number of results available for your query.

- Example Response

```
{
"profiles": [
{
"name": "Fiona Carney",
"location": "Dublin, County Dublin, Ireland",

"current_company": "Microsoft",
"pronoun": "She/Her"
}
],
```

```
"total_display_count": "78K+"  
}
```

Error Response (400 Bad Request)

If your filters are invalid or there is an error processing your request, you will receive an error message:

```
{  
  "error": "Failed to parse filters"  
}
```

- **Key Things to Note**

Pagination: Each request returns up to 25 results. Use the page parameter to access additional results.

Combining Filters: You can combine multiple filters to narrow down your search. Filters are combined using logical AND operations.

Valid Values: Ensure you're using valid values for each filter_type. Refer to [How to Build Filters](#) for a comprehensive list of filter types and acceptable values.

Filter Limitations: Some filters may not support certain operations (e.g., not in may not be supported for all filters). Check the filter documentation for details.

Authentication: A valid Bearer token is required for all requests. Ensure your token has the necessary permissions.

Data Privacy: Be mindful of data privacy regulations when handling personal data.
