

- **How to Build Filters**

The LinkedIn Company Search API allows filtering results using text, range, and boolean filters. Below is a guide on how to construct each type of filter with examples.

- **Text Filter**

A text filter is used to filter based on specific text values. Each text filter must contain **filter_type**, **type**, and a list of **value**.

1. **Valid Types:**

1. **in**: To include values.
2. **not in**: To exclude values (may not be supported for every filter).

Example:

```
{  
  
  "filter_type": "COMPANY_HEADCOUNT",  
  
  "type": "in",  
  
  "value": ["10,001+", "1,001-5,000"]  
  
}
```

- **Range Filter**

A range filter is used to filter based on a range of values. Each filter must contain **filter_type**, **type**, and **value**. Some range filters may contain a **sub_filter** which provides additional context.

1. **Valid Types:**

1. **between**: To specify a range of values.

Example:

```
{  
  
  "filter_type": "ANNUAL_REVENUE",  
  
  "type": "between",  
  
  "value": {"min": 1, "max": 500},  
  
  "sub_filter": "USD"  
  
}
```

```
}
```

- **Boolean Filter**

A boolean filter is used to filter based on true/false values. It doesn't contain any **type** or **value**.

Example:

```
{  
  
  "filter_type": "IN_THE_NEWS"  
  
}
```

- **Filters for Company Search**

- a. **COMPANY_HEADCOUNT**: Specifies the size of the company based on the number of employees. (**types**: [in])
- b. **REGION**: Specifies the geographical region of the company. (**types**: [in])
- c. **INDUSTRY**: Specifies the industry of the company. (**types**: [in])
- d. **NUM_OF_FOLLOWERS**: Specifies the number of followers a company has. (**types**: [in])
- e. **FORTUNE**: Specifies the Fortune ranking of the company. (**types**: [in])
